

KEY FEATURES

- Kyte Viewer allows users to view TIFF images with no software or plug-in downloads.
- Kyte Viewer runs fully integrated with FileNet software.
- Kyte Viewer was designed from the ground up as a web application that supports both .NET and J2EE web servers.
- Kyte Viewer eliminates costly security installation authorizations.
- Kyte Viewer enables users to create and edit annotations to their images.

*The next generation
image viewer for the web*

Recent web trends have driven companies to look for a rich-client experience without having to download and run bulky applications.

***Kyte Viewer** is the only product for FileNet customers that allows annotations, TIFF splitting, and thin client web-based viewing of multi-page TIFF images with no application download. Advantages: no software downloads, no plug-ins, no security challenges, and no more frustrations with client software installation.*

OVERVIEW

Kyte Viewer solves the client download problem by displaying images and annotations in a native web browser format with all of the basic viewer functionality. Annotations can also be viewed and edited and the TIFF splitting feature saves network bandwidth. There is no software to install on the client machine, no plug-ins to download.

Kyte Viewer is easy to maintain. Since it is server-based, there is no client software to install and version updates are single-sourced. Everyone in your organization will always be on the same page at the same time and you will never again have to worry about image viewer operating system conflicts on your desktop.

ANNOTATIONS

Kyte Viewer offers powerful annotation abilities. Highlight text, draw lines of various weights and colors, place arrows, and post comments on the image. The intuitive toolbar makes it easy to add clear and understandable annotations to your scanned documents.

THE SITUATION

FileNet users who want to view TIFF images and their annotations on the web have a problem: TIFF images are not natively supported in web browsers. In addition, for security reasons many companies have no-application-install policies. A user wanting simply to view a FileNet image may need to call the system administrator or submit a help desk ticket to install the viewer software. These delays cost productivity.

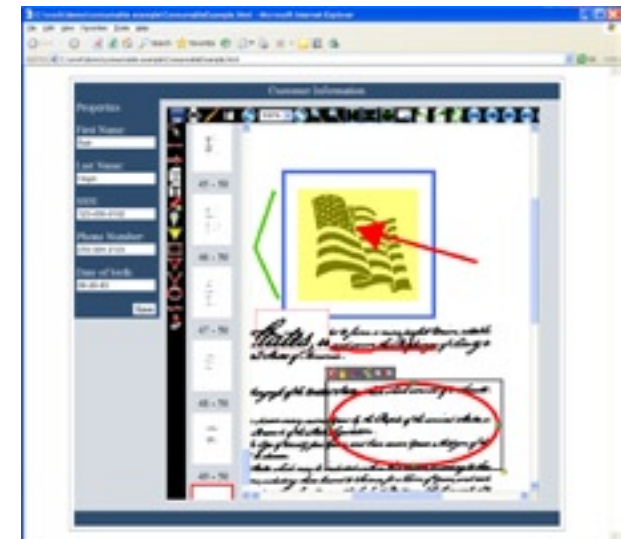

FileNet currently offers three methods to retrieve documents. The first two methods require an application download to every local machine. The Java Viewer is a 500 KB Applet download + 8MB JRE download and the IDM Viewer is 20 MB. Both are installation headaches. The 'Open' option allows you to save the image locally, but without a viewer application you will have no way to see the image.

	No application download required	View TIFF images	Navigation controls for image documents	Pure .NET ASPX	Pure J2EE JSP	Annotation capability
Kyte Viewer	●	●	●	●	●	●
Java Viewer		●	●			●
IDM View		●	●			●
Open	●					

This is the real power of Kyte Viewer—a versatile TIFF image viewer with no software downloads, no hassles, no problems.

CONSUMABLE

It is often difficult to integrate 3rd party components within your existing infrastructure. Kyte Viewer is designed to be consumed within other web applications. With a few quick configuration changes you can adapt the look and feel of Kyte Viewer to your custom web application by changing the toolbar and thumbnail colors.

Seamlessly integrate Kyte Viewer into your custom web application.
